Technical/Creative Director

Building Contractor – Cost Control and Project Contribution

Breaking ground on a church building project is a pivotal moment for any congregation. Months, or even years later after conception, it’s the building contractor who is responsible for delivering the desired result: a quality, new building, within the designated budget, and within a specific time line. **Please note**, this is not a recognition category based on beautiful pictures, **nor one** that recognizes architectural design, it is meant to reward excellence in executing the construction process and intended deliverables.
