

Why Are 150+ Top Universities Using 1 Beyond's Presenter Tracking Camera?

It's because of how well the **1 Beyond AutoTracker™ 3 Camera** completely automates lecture capture.

By smoothly tracking the presenter, it creates a successful distance learning experience for all students.

For a growing number of colleges and universities, the AutoTracker and its industry-leading auto tracking technology is the solution.

With features like Smart Tracking (with the moving person kept centered in the image); PoE+ (where power and data travel over a single Ethernet cable); and the option of adding AV over IP workflow with NDI, the AutoTracker adds up to a robust choice.

Interested in adding an AutoTracker to a classroom?

Rest easy in knowing the install is extremely simple. The AutoTracker and its smarts are self-contained, with no external equipment needed.

With simplicity comes reliability. The video snapshot above is from MIT, where an AutoTracker was installed six years ago. It continues flawlessly following presenters across multiple classes each day.
