

1 Beyond Announces Enhanced Zoom Rooms Integration with Room Controls

Posted on April 29, 2020 by 1 Beyond

Boston, MA – 1 Beyond Inc., the leading manufacturer of automated camera solutions, announces Zoom Rooms Room Controls for 1 Beyond cameras and multi-camera solutions, allowing users to change or turn on/off 1 Beyond automation features from the interface on the Zoom Room Controller (an iPad or tablet).

1 Beyond intelligent tracking cameras and smart switching systems create an enhanced Zoom meeting experience, allowing presenters to be automatically followed and cameras to auto-switch to the active speaker.

While tracking technologies are built-in and external control of 1 Beyond products is not required, Room Controls allow a user, for example, to turn off tracking so that cameras are not moving when people are not in a meeting, or to switch between different layouts.

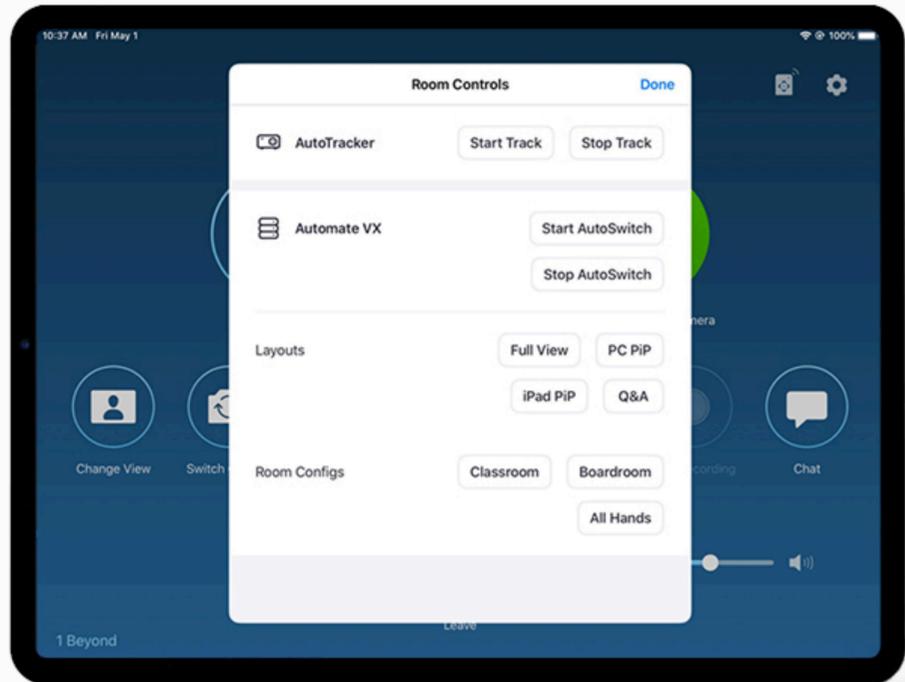

“Our goal is to simplify the meeting user-experience while providing video that would normally require a production crew,” says Terry Cullen, 1 Beyond Founder and C.E.O. “Offering Room Controls gives Zoom Rooms users that power within one interface.”

The 1 Beyond control options displayed for users are customizable per Zoom Room.

For 1 Beyond cameras, users can turn tracking on/off, select presets and manually pan-tilt-zoom with Room Controls. Cameras typically used with Zoom include the [1 Beyond AutoTracker™ camera](#), which automatically follows a presenter; the [1 Beyond AutoFramer™ camera](#) which automatically frames for however many people are in the room; and the [1 Beyond AutoFinder™ camera](#) which auto-locates a person holding a microphone equipped with a MicLocator unit.

[1 Beyond Automate™ VX](#) and [1 Beyond Automate™ Select](#) multi-camera solutions automate the switching between cameras and aiming of cameras either based on voice trigger or a simple button push. Users can start/stop auto-switching, manage local recordings, switch room configurations, change layouts, and/or manually switch to a camera and preset using the Zoom Rooms Controller.

Zoom Rooms Room Controls are included with every 1 Beyond camera or Automate system.

The image at top of this post shows Room Controls before a meeting is started. This image above displays the interface for Room Controls while in a meeting.

1 Beyond automated camera solutions offer an enhanced experience for Zoom Rooms with automatic tracking cameras and automatic camera switching.
